

Projects

1. Realtime AI Contact Center

A voice AI platform that can handle inbound and outbound calls for support, sales, bookings, and follow-ups. It can understand the caller, access company data, perform actions, update CRM systems, and transfer the call to a human when needed.

Core stack: FastAPI, LiveKit, LangGraph, LLMs, tool calling, deployment.

2. AI Sales / SDR Agent

An AI sales system that researches companies, finds and qualifies leads, gathers useful business information, creates personalized outreach, and updates the CRM automatically.

Core stack: LangGraph, CrewAI, LLMs, MCP, research tools, FastAPI.

3. AI Email Operations Agent

An AI employee connected to company email that can understand incoming emails, search relevant data, draft replies, perform business actions, route messages, and request human approval when required.

Core stack: FastAPI, LangGraph, MCP, LLMs, tool calling, workflows.

4. AI Document Processing Platform

A system that processes invoices, contracts, forms, receipts, and other business documents. It extracts structured data, validates information, detects missing or incorrect details, and sends the results into business workflows.

Core stack: LLMs, document AI, structured outputs, RAG, LangGraph, FastAPI.

5. Enterprise Knowledge & Research Agent

An internal AI assistant that connects to company documents, databases, and tools so employees can ask complex questions and get accurate answers with sources and citations.

Core stack: Advanced RAG, LangChain, LangGraph, MCP, vector databases, FastAPI.

6. AI Business Intelligence Analyst

An AI analyst that connects to company databases and business systems. Users can ask questions like “Why did revenue drop?” and the AI can query the data, analyze it, and explain the result.

Core stack: LLMs, SQL agents, LangGraph, FastAPI, analytics, dashboards.

7. AI QA Testing Agent

An AI agent that automatically tests websites and web apps, follows user flows, finds bugs, captures screenshots, generates reports, and can create GitHub or Jira issues.

Core stack: LLM agents, browser automation, MCP, FastAPI, GitHub/Jira integrations.
